#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Response to Pre-Appeal brief request*

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 11 and 13-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (U.S. 6,209,736) in view of Dieringer et al. (U.S. 6,161,710).

Chen et al discloses the claimed invention in figures 1 and 3, a nipple (11) having a stem and a base connected to the stem; a vent (3) disposed within bottle (1) and a bottom cap (4) connected to the second end of the bottle (1). Chen does not disclose the nipple (includes stem and base) wall thickness as recited the claims. However, Dieringer et al teaches in figure 5, that it is known in the art to have the nipple (includes stem and base) wall thickness as being claimed.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the Chen et al's nipple with its wall thickness as taught by Dieringer et al so that it would provide a natural nipple

baby feeding apparatus that eases the transition to and from bottle feeding and natural breast feeding.

***Response to Arguments***

2. Applicant's arguments filed 03/27/2006 have been fully considered but they are not persuasive. Applicant's arguments with respect to claims 11 and 13-33 have been considered but are moot in view of the new ground(s) of rejection.
